Verilog Level Experiments
Comprehensive Lab Report

This lab book consolidates every experiment found under the `experiments/level*` directories. Each entry includes the RTL and accompanying testbench source code to mirror a complete B.Tech-style lab record.

Generated on: 2026-02-22

Total experiments: 160

Level 1 - Experiment 01: Basic Gates Module

Folder: experiments/level1/exp01_basic_gates_module

Files: basic_gates.v, basic_gates_tb.v

// Experiment 1: Basic Gates Module







// Experiment 11: 2-to-1 Multiplexer (Gate-Level)



// Experiment 13: 4-to-1 Multiplexer (Dataflow)





// Experiment 17: 3-to-8 Decoder with Enable

 // Experiment 20: 1-bit Magnitude Comparator // Experiment 21: 2-bit Magnitude Comparator

// Experiment 22: 4-bit Magnitude Comparator (Dataflow)

 // Experiment 24: BCD to 7-Segment Decoder

 // Experiment 27: 4-bit Ripple Carry Adder (Dataflow) 





 

// Experiment 35: 4-bit Array Multiplier

// Experiment 37: 4-bit Comparator with Equal/Greater/Less Outputs

// Experiment 38: ALU with 4 Operations

// Experiment 39: ALU with 8 Operations 

// Experiment 41: SR Latch (NAND-based, Gate-Level)





// Experiment 44: D Flip-Flop with Asynchronous Reset

// Experiment 45: D Flip-Flop with Synchronous Reset

// Experiment 46: D Flip-Flop with Enable

// Experiment 47: D Flip-Flop with Asynchronous Set and Reset









// Experiment 52: 8-bit Shift Register (Parallel In, Serial Out - PISO) // Experiment 53: 8-bit Shift Register (Serial In, Parallel Out - SIPO)



 

 

// Experiment 58: 4-bit Up/Down Counter with Direction Control

// Experiment 59: 4-bit Counter with Load and Enable

// Experiment 60: 8-bit Counter with Terminal Count 

// Experiment 62: BCD Counter (0-9, decade counter)

// Experiment 63: 2-digit BCD Counter (00-99)



 





// Experiment 69: Frequency Divider (Divide by 2/4/8/16)





 



// Experiment 78: Vending Machine (Complex: nickel=5c, dime=10c, quarter=25c; price=25c)





 // Experiment 82: Password Lock (4-digit sequence: 1,0,1,1)



 

 



 



















// Experiment 104: Integer Square Root (Iterative, 8-bit) // Experiment 105: 8-bit Fixed-Point Adder (Q4.4 format)

// Experiment 106: 8-bit Fixed-Point Multiplier (Q4.4) // Experiment 107: Half-Precision Floating Point Adder (FP16)





 // Experiment 112: 4-Stage Pipelined Multiplier (8x8 -> 16)

 // Experiment 114: Carry-Lookahead (Parallel Prefix) Adder (4-bit)



 

// Experiment 120: Out-of-Order Issue Unit (2-entry Reservation Station)

// Experiment 121: Minimal RISC CPU (4 instructions)

// Experiment 122: RISC CPU with 8 instructions







// Experiment 127: UART with RX FIFO (Top Level Integration)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                // Ins







 







   // Experiment 141: Assertion-Based Verification for Sync FIFO



// Experiment 143: Constrained Random Verification for 8-bit Adder // Experiment 144: Valid-Ready Protocol Checker





// Experiment 147: Setup and Hold Time Constraint Checker



// Experiment 153: GPIO Controller (8-bit, with direction and interrupt)

// Experiment 154: UART with Interrupt







// Experiment 158: System Timer (with compare, overflow interrupt)



// Experiment 160: Complete SoC (CPU + Memory + GPIO + UART + Timer)
